Introduction

Formalisation of cut-admissibility for the GLS sequent system

- cut-admissibility applies for many sequent systems
- proofs can be tedious details omitted ("other cases are similar")
- we try to get common elements of the proofs for re-use
- provability logic has unusual features (*GL* rule has formula on both sides of ⊢), proof more complex
- previous proofs wrong, or allegedly so but actually OK
- formalised proof in Isabelle/HOL confirms the result, omits no details, and uses many lemmas applicable for other logics

Sequents and Multisets, Sets and Provability Logic

- sequents $\Gamma \vdash \Delta$ where Γ and Δ are "collections" of formulae
- Our "collections" are multisets (unordered, but repetitions counted)
- Tree-shaped derivations, conclusion at the bottom
- Tree branches where rule has > 1 premise, leaf where rule has no premises

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Provability Logic

- explicit weakening and contraction rules
- usual (additive) rules for $\neg, \wedge, \lor, \rightarrow$
- additional rule *GLR* which characterises **GL**:

$$\frac{\Box X, X, \Box B \vdash B}{\Box X \vdash \Box B} GLR \text{ or } GLR(B) \text{ or } GLR(X, B)$$

• in our formalisation, cut or multicut rules not part of GLS

$$(\mathsf{cut}) \frac{\Gamma \vdash A, \Delta \qquad \Gamma, A \vdash \Delta}{\Gamma \vdash \Delta}$$
$$(\mathsf{multicut}) \frac{\Gamma' \vdash A^n, \Delta' \qquad \Gamma'', A^m \vdash \Delta''}{\Gamma', \Gamma'' \vdash \Delta', \Delta''}$$

Derivability Predicates and their Induction Principles

An inference rule is a list of premises and a conclusion. Then

• derrec rls prems is the set of sequents derivable using rules rls from the set prems of premises.

The induction principle (simplified) from the definition of derrec :

$$\begin{array}{ll} x \in \textit{derrec rls prems} & \forall c \in \textit{prems. P c} \\ \forall (\textit{ps}, c) \in \textit{rls.} (\forall \textit{p in ps. P p}) \Rightarrow \textit{P c} \\ \hline P x \end{array}$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Induction on two derivations

Induction for a property of two derivations (eg cut-admissibility!)

 $cl \in derrec \ rlsl \ \{\} \qquad cr \in derrec \ rlsr \ \{\} \\ \forall (lps, lc) \in rlsl. \ \forall (rps, rc) \in rlsr. \\ (\forall lp \in lps. \ P \ lp \ rc) \land (\forall rp \in rps. \ P \ lc \ rp) \Rightarrow P \ lc \ rc \\ P \ cl \ cr$

To prove $P(C_l, C_r)$, the induction hypothesis is that $P(\mathcal{P}_{li}, C_r)$ and $P(C_l, \mathcal{P}_{rj})$ hold for all *i* and *j*:

$$\frac{\mathcal{P}_{l1}\dots\mathcal{P}_{ln}}{\mathcal{C}_{l}}\rho_{l} \quad \frac{\mathcal{P}_{r1}\dots\mathcal{P}_{rm}}{\mathcal{C}_{r}}\rho_{r}$$

$$(cut ?)$$

The Induction Pattern in Cut-Admissibility Proofs Definition of gen_step2ssr

In the diagram below, to prove $P(C_I, C_r)$, the induction hypothesis is that $P(\mathcal{P}_{Ii}, C_r)$ and $P(C_I, \mathcal{P}_{rj})$ hold for all *i* and *j*:

$$\frac{\mathcal{P}_{l1}\ldots\mathcal{P}_{ln}}{\underset{?}{\mathcal{C}_{l}}}\mathcal{R}_{l} \qquad \frac{\mathcal{P}_{r1}\ldots\mathcal{P}_{rm}}{\underset{?}{\mathcal{C}_{r}}}\mathcal{R}_{r}$$

gen_step2ssr expresses that property P holds, given appropriate inductive hypotheses, for last rules on each side \mathcal{R}_I and \mathcal{R}_r . P might be that cut-admissibility holds for cut-formula A, rule set rls, assuming it holds for smaller cut-formulae

The Induction Pattern in Cut-Admissibility Proofs

- We defined a predicate gen_step2ssr (see the paper, Defnition 1), which says that you can prove the inductive step at a point in the derivation
- We proved a lemma which says that if this property holds throughout a tree for a property *P*, then *P* holds (Theorem 1)
- Then we proved that this predicate gen_step2ssr holds for the case where the cut-formula A is parametric on the left, subject to certain conditions: a result applicable to many cut-elimination proofs (Theorem 2)

The proof of Goré & Ramanayake, and our proof

The proof of Goré & Ramanayake

- Proves admissibity of (*cut*) (we prove admissibity of (*multicut*))
- Induction on height of derivation and on "width"
- Induction on size of cut-formula.

In contrast, in our proof

- we prove admissibity of (*multicut*)
- Induction on "fact of" derivation and on del0 (approximates to ∂⁰, related to width)
- Well-founded induction on immediate subformula relation

Deep and Shallow Embeddings — Derivations

- Deep or shallow embeddings of *derivations*, *rules* and *variables*.
- *shallow* means that a feature in the logic is identified with the same feature of Isabelle/HOL

Derivations:

- Deep: the actual derivation tree is a data structure in HOL datatype 'a dertree = Der 'a ('a dertree list) | Unf 'a (* unfinished leaf not proved *) there is a predicate which tests whether each node of an derivation tree is an instance of a rule
- Shallow: no derivation tree data structure, but an inductive definition in HOL saying what formulae are derivable; (the course of a proof, in HOL, of a formula, could be described by a derivation tree)

Using a deep embedding — explicit derivation trees

To define del0 on a derivation we need an explicit derivation tree

A *valid* tree is one whose inferences are in the set of rules and which as a whole has no premises.

Lemma

Sequent $X \vdash Y$ is derivable, shallowly, from the empty set of premises using rules rls (ie, is in derrec rls {}) iff some explicit derivation tree dt is valid wrt. rls and has a conclusion $X \vdash Y$.

"(?a : derrec ?rls {}) = (EX dt. valid ?rls dt & conclDT dt = ?a)"

can "mix and match" a deep embedding (derivation trees) with a shallow embedding (inductively defined sets of derivable sequents)

Defining del0

Definition (del0)

For derivation tree dt and formula B, define del0 B dt:

- if the bottom rule of dt is GLR(Y, A) (for any Y, A), then del0 B dt is 1 (0) if □B is (is not) in the antecedent of the conclusion of dt
- if the bottom rule of dt is not *GLR*, then del0 *B* dt is obtained by summing del0 *B* dt' over all premise subtrees dt' of dt.

ie, you go up each branch of an explicit derivation tree until you find an instance of the GLR rule, and count 1 where B is in Y

The Proof

Lemma

If μ is a valid derivation tree with conclusion $\Box X, X, \Box B \vdash B$, and del0 B $\mu = 0$, then $\Box X, X \vdash B$ is derivable.

Proof.

Applying the *GLR* rule to the $\Box X, X, \Box B \vdash B$ gives $\Box X \vdash \Box B$. Tracing upwards, change each $\Box B$ to $\Box X$ in the usual way. Contraction is not problematic since we use, as the inductive hypothesis, that *all* occurrences of $\Box B$ can be replaced by $\Box X$.

Defining muxbn

$$\frac{\mu \left\{ \begin{array}{c} \Pi_{l} \\ \hline \Box X, X, \Box B \vdash B \\ \hline \Box X \vdash \Box B \\ \hline \Box X, Y \vdash Z \end{array}}{\Box X, Y \vdash Z} \rho \\ (multicut ?)$$

Figure: A multicut on cut formula $\Box B$ where $\Box B$ is left-principal via *GLR*

Definition (muxbn)

muxbn B n holds iff: for all instances of Figure 1 (for fixed B) such that del0 B $\mu \leq n$, the multicut in Figure 1 is admissible.

Lemma

If multicut on B is admissible, then muxbn B 0 holds.

Proofs of muxbn

$$\frac{\mu\left\{\begin{array}{c} \Pi_{l} \\ \hline \Box X, X, \Box B \vdash B \\ \hline \Box X \vdash \Box B \\ \hline \Box X, Y \vdash Z \end{array}}{\Box X, Y \vdash Z} \rho \qquad (multicut ?)$$

Lemma

If multicut on B is admissible, then muxbn B 0 holds.

Proof.

 $\Box X \vdash \Box B$ is derivable from $\Box X, X, \Box B \vdash B$ via GLR(X, B). By Lemma 3, $\Box X, X \vdash B$ is derivable. The rest of the proof is by induction on the derivation of $\Box B^k, Y \vdash Z$, in effect, by tracing relevant occurrences of $\Box B$ up that derivation. If an inference GLR(Y, C) is encountered, with B in Y, then a proof is constructed using the previous lemma

From muxbn B n to muxbn B (n+1)

$$\frac{\mu\left\{\begin{array}{c} \Pi_{I} \\ \hline \Box X, X, \Box B \vdash B \end{array}\right.}{\Box X \vdash \Box B} GLR(B)$$

Suppose delO $B \ \mu = n + 1$.

Since del0 $B \mu > 0$, the tree $\mu/\Box X \vdash \Box B$ contains one or more branches with a *GLR* rule, with $\Box B$ in the antecedent. (one such branch shown).

$$\frac{\Box G, G, \Box B^{k}, B^{k}, \Box A \vdash A}{\Box G, \Box B^{k} \vdash \Box A} GLR(A)$$

$$\frac{\Box G, \Box B^{k} \vdash \Box A}{\vdots}$$

$$\frac{\Box X, X, \Box B \vdash B}{\Box X \vdash \Box B} GLR(X, B)$$

From muxbn B n to muxbn B (n+1)

$$\frac{\Box G, G, \Box B^{k}, B^{k}, \Box A \vdash A}{\Box G, \Box B^{k} \vdash \Box A} GLR(A) \text{ (delete this)}$$

$$\frac{\Box G, \Box B^{k} \vdash \Box A}{\vdots}$$

$$\frac{\Box X, X, \Box B \vdash B}{\Box X \vdash \Box B} GLR(X, B)$$

Delete top step, adjoin $\Box A$ on the left, extra weakening step:

$$\frac{ \Box A, \Box G, \Box B^{k} \vdash \Box A}{ \vdots }$$

$$\frac{ \Box A, \Box X, X, \Box B \vdash B}{ \Box A, \Box X, X, \Box B \vdash B} (weakening) (extra step)$$

$$\frac{ \Box A, \Box X \vdash \Box B}{ \Box A, \Box X \vdash \Box B} GLR(B)$$

Call this $\mu^A / \Box A, \Box X \vdash \Box B$, then delo $B \ \mu >$ delo $B \ \mu^A$, so $\mu^A / \Box A, \Box X \vdash \Box B$ can be left branch of an admissible multicut.

Multicutting with $\Box A, \Box X \vdash \Box B$

We then, essentially, re-do the proof, using

- Admissible multicuts with $\Box A, \Box X \vdash \Box B$
- Admissible multicuts on cut-formula B

before the GLR(A) step, so that the GLR(A) step does not contribute to del0.

(Several steps manipulating proofs, see paper).

That is, given a derivation μ of $\Box X, X, \Box B \vdash B$ with del0

 $B \ \mu = n+1$, we have a derivation μ' with del0 $B \ \mu' = n$.

Lemma

Assume that multicut-admissibility holds for cut-formula B, and that muxbn B n holds. Then muxbn B (n + 1) holds.

Now, since muxbn B 0 holds, repeated use of this Lemma gives that muxbn B n for all n.

The cut-admissibility theorem

Theorem

Multicut is admissible in GLS.

Proof.

Most of the proof is as usual for cut-elimination proofs, using induction on the size (or structure) of the cut-formula. The difficult case is with a multicut as in the Figure, which is handled by the previous lemma.

(日) (圖) (E) (E) (E)

Conclusion : value of the formalisation

- proofs usually tedious, with many details varying only slightly
- many cases or details usually omitted in paper proofs
- this may lead to erroneous proofs
- formal proof avoids this risk
- Our formalisation includes:
 - formalisation includes general treatment of derivation trees
 - general theorem expressing the appropriate inductive principle

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

• general lemmas for many cases in this and other proofs
